

# Unit 1

---

## 1.5 Good Definitions

# DO NOW

## (1.4 Workbook Example Exercises Odds)

### I Complete (Mini Lesson)

---

Work with a partner. For Exercises 1–7, each partner should try to give a different correct answer.

1. Name a pair of parallel lines.
2. Name a pair of skew lines.
3. Name a pair of lines that are neither parallel lines nor skew lines.
4. Name a pair of parallel planes.
5. Name a pair of planes that intersect in a line.
6. Name three planes that intersect at a point.
7. Name a pair of skew lines different from the pair named in Exercise 2.

## Practice 1-4: Mixed Exercises

1. 4   2. 12   3. 20   4. 6   5. 22   6. -10 or 6   7. -1 or 1

8. any three of the following:  $\angle O$ ,  $\angle MOP$ ,  $\angle POM$ ,  $\angle 1$

9. 15   10. 31   11. 14   12. 51   13. 90   14. 17   15. 107

16. 141   17. 68   18.  $\angle ABD$ ,  $\angle DBE$ ,  $\angle EBF$ ,  $\angle DBF$ ,

$\angle FBC$    19.  $\angle ABE$ ,  $\angle DBC$    20.  $\angle ABE$ ,  $\angle EBC$

21.  $x = 11\frac{2}{3}$ ;  $AB = 31$ ;  $BC = 31$    22.  $x = 35\frac{2}{3}$ ;

$AB = 103$ ;  $BC = 103$

# Answers (mini lesson)

---

Answers may vary. Samples:

1.  $\overleftrightarrow{AB}$  and  $\overleftrightarrow{EF}$    2.  $\overleftrightarrow{AB}$  and  $\overleftrightarrow{DH}$    3.  $\overleftrightarrow{AC}$  and  $\overleftrightarrow{AE}$

4. plane  $ABD$  and plane  $EFGH$    5. plane  $CDH$  and plane  $BFD$

6. plane  $CDH$ , plane  $ACG$ , and plane  $ABD$    7.  $\overleftrightarrow{EG}$  and  $\overleftrightarrow{BF}$

---

## Objective 1.5

---

- Understanding the meaning of terms like bisector and perpendicular

## Essential Question

What is the bisector of an angle?

---

# Vocabulary

---

- **Midpoint:** Point that divides a segment into two congruent segments.
  - **Perpendicular lines:** Lines that intersect at right angles. (90 degrees)
  - **Perpendicular bisector:** is a line, segment or ray that is perpendicular to a segment at its midpoint
  - **Angle bisector:** Angle that divides an angle into two congruent angles.
-

# Example 2 page 34 TE

---

□ KN bisects  $\angle JKL$

$$m\angle JKN = 5x - 25$$

$$m\angle NKL = 3x + 5$$

Solve for  $x$  and find  $m\angle JKN$

**ANSWER  $x=15$ ,  $\angle JKN = 50$**

---

# Problem 10 Page 34 TE

---

□ In the diagram AB bisects  $\angle CAD$ .

$$\angle CAB = 7x + 4$$

$$\angle BAD = 10x - 20$$

Solve for x and find  $m\angle CAD$

**Answer:  $x=8, 120$**
